Abstract: The following thesis discusses 2 popular English language applications that can be learned quickly and easily. Nowadays, it is possible to learn a language quickly with modern apps.

Key words: CALI, CALL, TELL, MALL, Lingualeo, Duolingo

The principle of computer assistance in the study of foreign languages appeared in 1981 in the works of British scientists G. Davies and D. Steele. In America, this term has been renamed CALI (Computer Assisted Language Instruction). Subsequently, the term CALL is not was used due to its association with a method oriented towards the teacher, and not the student, and the concept of TELL came to replace it - Technology Enhanced Language Learning.

Later, this principle found its new embodiment in pocket personal computers (PDAs) or smartphones, and since the 1990s the concept of mobile assistance appeared in the study of foreign languages - MALL.

At the moment, due to the greater possibilities of modern mobile devices their didactic potential in learning English language can be expanded. Our current life cannot be imagined without mobile phones. We communicate with them, our distant relatives and friends. We always feel that they are by our side. Gadgets are not only exciting games, but also unlimited opportunities for improving your knowledge.

But we can learn English quickly and easily using mobile devices. We will think about 2 popular apps below.

1. Lingualeo

Probably one of the best apps for learning English. You can work with most of the exercises for free. A paid account is inexpensive and allows you to take special grammar courses, and also gives you access to additional types of exercises. A free account allows you to learn new words, hone your spelling skills, watch videos with subtitles, decipher lyrics, and more.

What's good about Lingualeo? The authors have created a system that itself determines your strengths and weaknesses and develops a training program for you. You just have to follow the suggested recommendations. Is it hard to force yourself to study? The authors of the application have taken care of this too: a motivation system has been developed for you. You need to feed Leo the Lion cub with meatballs every day - complete tasks. If you practice 5 days in a row, you will receive a small but nice prize, for example, activation of a premium account for a day. The application works stably, there is a version for Android and iOS.

2. Duolingo

With this free app, you can learn not only English, but also German, French, Spanish, Italian and Portuguese. It can be used as a supplementary exercise book for beginner English learners. Internet connection is only needed to download the next stage. The course is divided into stages according to the principle "from simple to complex". If you know the basics of the language, pass the initial steps ahead of schedule and go straight to the next level.

What's good about Duolingo? All skills are trained here: writing and speaking (you will be asked to pronounce the studied phrases), reading and listening. The program is stable. There is a version for Android and iOS.

In conclusion, with the help of mobile applications, a person can learn a language independently
